Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Hall [U.S. 6034506].

With respect to claim 1 (Currently Amended), Hall discloses a rechargeable battery [Fig. 4, 11] which includes a plurality of connected cells [col. 3 lines 35-44], comprising: a first electrode configured to extract electric power from the battery [col. 3 lines 49-55; Fig. 3]; and a second electrode which is different from said first electrode and is configured to charge and discharge each of said plurality of cells individually [col. 3 lines 5-12; Fig. 3]; and a switch [Fig. 3, Sb] configured to series connect said plurality of cells when the battery is not attached [Fig. 3, with SX1 open the battery is not electrically attached to DC-DC supply 12, and is in the “discharge configuration” shown] to a charger [Fig. 2, 15] such that electric power can be extracted from the series-connected plurality of cells through said first electrode [Fig. 3, series discharge configuration; col. 3 lines 62-67], and configured to electrically separate said plurality of cells from one another when the battery is attached to the charger [Fig. 3, with SX1 closed the battery is electrically attached to DC-DC supply 12 and is in the “charge configuration” shown] such that each of said plurality of cells can be charged individually

by the charger through said second electrode [Fig. 3, "charge configuration"; col. 3 lines 5-12; col. 4 lines 57-62].

With respect to claim 12 (Previously Presented), Hall discloses that the battery is a battery pack in which said plurality of cells are assembled [Fig. 3, 11; col. 4 lines 47-60].

Response to Arguments

Applicant's arguments received 02/26/2008 have been considered but are moot in view of the new ground(s) of rejection. For future correspondence, the applicant is kindly requested to identify in the submitted drawings the claimed **"first electrode"** and **"second electrode"** as recited in claim 1.
